Generated on the BGIS website: 10/13/2014

Disclaimer:

The Land-Use Decision Support (LUDS) Tool has been developed to facilitate and support biodiversity planning and land-use decision-making at a national and provincial level. Its primary objective is to serve as a guide for biodiversity planning and should not replace specialist ecological assessments.

While SANBI endeavours to keep the information on BGIS up-to-date and makes reasonable efforts to ensure that the data it publishes are accurate, SANBI makes no representations or warranties of any kind, express or implied, about the completeness, accuracy, reliability, suitability or availability with respect to the information contained on the website for any purpose. SANBI will not be liable for any loss or damage; including without limitation, indirect or consequential loss or damage, or any loss or damage whatsoever arising from loss of data or profits arising out of, or in connection with, the use of this tool.

Please note: that the spatial information incorporated into the LUDS Tool was mapped at various scales, with much of the spatial information mapped at a scale of 1:250 000 (i.e. 1 cm on the map = 2,5 km on the ground) or greater. To ensure maximum accuracy, always check the map against actual conditions on the ground when undertaking planning and decision-making, or contact the relevant conservation authority for additional assistance.

Please forward any queries or concerns to BGIShelp@SANBI.org.za.

1. Information extracted from national datasets

The information below is extracted for the analysed area from national datasets available on BGIS. There is a short description of the dataset under each heading and the URLs to the webpage on BGIS with further information.

1.1. National terrestrial information

1.1.1. National list of threatened terrestrial ecosystems

BGIS source: National list of threatened terrestrial ecosystems for South Africa (2011) – original extents

A list of all threatened ecosystem patches which original extent intersects the analysed area. Note: the data represents the **original extents** of the threatened ecosystems; in other words, natural areas which have been converted to agriculture, mining and urban areas have been **included**. Please view the area using the BGIS online map viewer Bing maps or Google maps tool in order to see whether any natural vegetation may still exist.

1.1.2. National vegetation types

BGIS source: Vegetation Map of South Africa, Lesotho and Swaziland (Mucina & Rutherford 2006)

A list of all the national vegetation types the corresponding number of patches of each which original extents covered the analysed area. Note that this list is based on the estimated original extents of the vegetation types prior to any transformation. Please view the area using the BGIS online map viewer Bing maps or Google maps tool in order to see whether any natural vegetation may still exist.

1.2. National aquatic information

1.2.1. Wetlands (NFEPAs Wetlands/National Wetlands Map 4)

BGIS source: National Freshwater Ecosystem Priority Areas (NFEPAs) Wetland Map/National Wetlands Map 4 and NFEPAs wetland clusters

A list of all Wetland units found within the analysed area, should these belong to a wetlands cluster its information is also included. Wetlands and wetland clusters which were selected as freshwater ecosystem priority areas (FEPAs) are indicated. A key to the information codes used is given below.

1	Wetlands that intersect with a Ramsar site
2	Wetlands within 500 m of a IUCN threatened frog point locality
2	Wetlands within 500 m of a threatened waterbird point locality
2	Wetlands (excluding dams) with the majority of its area within a sub-quaternary catchment that has sightings or breeding areas for threatened Wattled Cranes, Grey Crowned Cranes and Blue Cranes
2	Wetlands (excluding dams) within a sub-quaternary catchment identified by experts at the regional review workshops as containing wetlands of exceptional biodiversity importance, with valid reasons documented
2	Wetlands (excluding dams) within a sub-quaternary catchment identified by experts at the regional review workshops as containing wetlands that are good, intact examples from which to choose
3	Wetlands (excluding dams) within a sub-quaternary catchment identified by experts at the regional review workshops as containing wetlands of biodiversity importance, but with no valid reasons documented
4	Wetlands (excluding dams) in A or B condition AND associated with more than three other wetlands (both riverine or non-riverine wetlands were assessed for this criterion)
4	Wetlands in C condition AND associated with more than three other wetlands (both riverine or non-riverine wetlands were assessed for this criterion)
5	Wetlands (excluding dams) within a sub-quaternary catchment identified by experts at the regional review workshops as containing impacted Working for Wetland sites
6	Any other wetland (excluding dams)

1.2.2. Sub-quaternary catchments and rivers (NFEPA)

BGIS source: National rivers and sub-quaternary catchment FEPA status (NFEPA)

A list of all NFEPA sub-quaternary catchments and their FEPA status followed by the river units they contain with various parameters and indicators. A sub-quaternary catchment and its river indicated as FEPA are fresh water ecosystem priority areas, A blank FEPA status indicates that NFEPA did not give the sub-quaternary catchment or river priority status. 2. Information extracted from the most relevant biodiversity conservation plan for Hessequa Municipality

The information below is extracted for the analysed area from the most relevant and up to date biodiversity conservation plan available on BGIS - **Fine Scale Plan for Hessequa Municipality**. There is a short description of the dataset under each heading and the URLs of the webpage on BGIS with further information.

Note on the criteria defining the CBA map categories used by the C.A.P.E. Fine Scale Biodiversity Conservation Plans (FSPs)

In order to better understand the Fine Scale Biodiversity Conservation Plan CBA maps examine the table below which explains the CBA categories they use. Further information see the relevant biodiversity sector plan (FSP) handbook.

Category	Defining criteria
Protected areas (PA)	Any formally Protected Area (except for Mountain Catchment Areas) including nature reserves and national parks, forest nature reserves, RAMSAR sites, World Heritage sites, marine protected areas
Critical Biodiversity Areas	Any terrestrial or aquatic area required to meet biodiversity pattern and/or process thresholds including: <ul style="list-style-type: none"> • All ecosystems listed in terms of the National Biodiversity Act • All “best design sites” needed to maintain pattern and process in the landscape.
Terrestrial CBAs	<ul style="list-style-type: none"> • All remaining patches of Critical Endangered vegetation • All known point localities of Species of Special Concerns • Endangered, Vulnerable or Least Threatened vegetation required to meet national thresholds • Landscape corridors required to meet the predefined thresholds for spatially explicit ecological processes (e.g. upland-lowland corridors, coastal-and-sand movement corridors, etc.)
Aquatic CBAs	<ul style="list-style-type: none"> • River reaches required for threshold of each river type • River reaches required to meet threshold for sanctuaries for indigenous fish species • Sub-catchments required for achieving river type b conservation thresholds • Sub-catchments required to meet threshold of sanctuaries for indigenous fish species of two sanctuaries per indigenous fish species • Wetlands required to meet a threshold of each wetland types. These were chosen based on size, amount natural vegetation, red list plant species, important habitat for focal amphibian or good condition.
Ecological Support Areas	<ul style="list-style-type: none"> • Supporting zone required to prevent degradation of Critical Biodiversity Areas and Protected Areas including: <ul style="list-style-type: none"> • All remaining wetlands or river reaches and their terrestrial buffers (riparian habitat) • Sub-catchments containing: a) significant groundwater recharge and discharge sites; b) upstream management zones; or c) connections for fish sanctuaries
Aquatic – Critical Ecological Support Areas (CESAs)	<ul style="list-style-type: none"> • Wetlands: non-significant wetlands or wetland clusters which either a) support a CBA river or CBA wetland or b) are in a good condition and fall within a CBA or CESA sub-catchment • Rivers: a) river reaches which are important for connectivity between CBA river reaches, b) major rivers that support CBA river segments or wetland or c) minor rivers situated within priority sub-catchments • Sub-catchments not containing CBA rivers or wetlands but rather maintaining the integrity of the downstream CBA
Aquatic – Other ecological support Areas (OESAs)	<ul style="list-style-type: none"> • All remaining wetlands • All remaining river reaches • Sub-catchments containing: a) significant groundwater recharge and discharge sites; b) upstream management zones; or c) connections for fish sanctuaries

Other Natural Areas (ONAs)	Natural areas not required to meet national thresholds (on condition that all CBA are protected) <ul style="list-style-type: none"> • Remaining patches of Endangered, Vulnerable or Least Threatened ecosystems not required to meet national thresholds
No Natural Remaining Areas (Transformed)	These areas no longer contain natural areas and their safeguarding would not result in any biodiversity protection including cultivated lands, plantations, mined areas, urban areas, infrastructure, dams and areas under coastal development.

Note: Protected Areas, terrestrial CBAs and other natural areas are listed under terrestrial information and includes the biodiversity feature information of each map unit. Critical and Other ESAs are listed under Aquatic information and no addition information is available apart from the CBA map category and its management objectives for each map unit.

2.1. Terrestrial information for Hessequa Municipality

BGIS source: Fine Scale Plans for the Hessequa Municipality – Terrestrial CBA layer

A list of Critical Biodiversity Area (CBA) map units that intersect with the analysed area. Included are each unit's CBA map category, management objectives and biodiversity features information which is indicative of its CBA map category classification. Description of the biodiversity features are given below.

These plans were created at a scale of 1:10000 therefore the individual CBA map units tend to be small in size and a large analysis area may result in a confusingly long list of units. Zoom further into the map and reduce the size of the analysis area to obtain a shorter, more understandable list of units. Unfortunately the CBA map unit's size is not yet available.

Description of biodiversity feature information included for each terrestrial CBA map unit

Biodiversity feature	Description
Category	Critical Biodiversity Area (terrestrial, aquatic, or buffer) Protected Areas Other Natural Areas No Natural Areas
Management objectives	Overall management objective of the site; desired state
Habitat condition	Specifies the condition of the unit's habitat.
Protected area name	If the unit's category is protected area its name is specified.
Vegetation type threshold	Unit included to meet quantitative targets that focus on how much of a vegetation type should be protected to maintain ecosystem function.
Vegetation remnant	Unit contains remnants of a vegetation type that are in natural near natural condition.
Indigenous forest	Unit contains indigenous forest.
Red data list species	Unit contains known habitat for a Red Data List (Critically Endangered, Endangered, or Vulnerable) plant species
Restricted, endemic or threatened plants:	Unit contains known habitat for a plant species which is restricted, endemic, or threatened
Wetland thresholds	Unit included to meet quantitative targets that focus on how much of a wetland type should be protected to maintain ecosystem function.
Irreplaceable wetland	Unit supports an irreplaceable wetland (assigned rank of 1, indicating the best remaining examples of the wetland type)
Priority subcatchments	Unit in a subcatchment identified as important through systematic biodiversity planning process.
Edaphic interface	Unit included to meet edaphic interface target

2.2. Aquatic Information for Hessequa Municipality

BGIS source: Fine Scale Plans for the Hessequa Municipality – Aquatic CBA layer

A list of aquatic Critical Biodiversity Area (CBA) map units that intersect with the analysed area. The CBA map category (Aquatic CBA, CESA or OESA), their buffers and the management objectives are listed for each CBA map unit, no biodiversity feature information is available.

3. Municipal and cadastral information

3.1. Province and municipality

The Municipal Demarcation Board's 2009 boundaries are used for the BGIS LUDS tool as these correspond with the municipal biodiversity summaries. The boundaries in the LUDS tool will be updated along with the next municipal biodiversity summaries update.

Municipal biodiversity summary information can be on BGIS by going to the following link

<http://196.21.45.151/devBGIS/municipalities/municipality.asp>.

and following the steps i.e. choose a province and then a municipality on the map or from the dropdown box. These steps also constitute STEP 1: *Find the appropriate BGIS map (LUDS Map) for your municipality*. Please contact [SANBI municipal programme](#) for more information about the Municipal Biodiversity Summaries Project.

Note: the LUDS tool does not allow analyses to cut cross municipal and provincial boundaries i.e. any analysis must fall within a single province and municipality.

Province (code): Western Cape(WC)

Municipality (Cat B): Hessequa (WC042)

3.2. Cadastral information

A list of all cadastral units (parent farm and sub-unit properties only) which intersect the analysis area.
